

Information leaflet for people returning from „COVID 19 RISK AREAS“

valid until 09/10/2020

Entry from a defined risk area

see:

https://www.rki.de/DE/Content/InfAZ/N/Neuartiges_Coronavirus/Risikogebiete_neu.html

is subject to a 14-day quarantine and the obligation to report to the responsible health department. In Rostock we ask you to send your name, date of birth, address, callback number as well as day and country of entry via e-mail to corona@rostock.de.

According to the quarantine regulation of the state of Mecklenburg-Vorpommern, the obligatory first test after entry does NOT cancel the quarantine. The quarantine can be shortened on informal request (preferably by email) and if there are no symptoms of the illness. In Rostock, it is possible to do a second test 6 days after entry. If this test turns out negative and is sent to the responsible health department, the health department will lift the isolation at home..

Short facts:

- **14 days of quarantine after entry from a risk area**
- **The initial test on entry does not lift the quarantine**
- **The quarantine can only be lifted on presentation of a second negative test. This test can take place not earlier than 6 days after entry**
